

EMPATHY MAP

- How can the society be like this?
- What remedy should be taken to make these garbage clean?
- As everyone is just talking who will take the initiative for this?
- Why can't they have regular monitoring and cleaning?

SAYS

- The solution should be in the kind of reducing the manpower and improving the machines.
- Need an automatic level indicator for alerting the local authorities.
- A system to avoid accumulation of toxic gases.
- The response should be in least possible time
- 24/7 monitoring and alerting system.

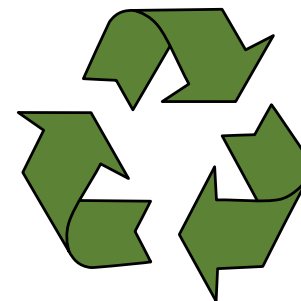

THINKS

- Ultrasonic sensors and Gas sensor can be used for the level indication and avoiding the accumulation of toxic gases.
- E-mail notification can be sent to the respective municipalities when the garbage level is full.
- User interface will be developed for the continuous monitoring bins in their locality

DOES

- Cleaner and healthier environment
- Disease free environment
- Immediate response
